Changes in the Player Module:

- 1) We no longer need the `player_number_generator()` function.
- 2) For `player_option_picker()`:
 - > rename function to `pick_number_or_card()`
 - > Should return the declared number if user wants to keep the declared number
 - > Should return -1 if user wants to choose the card given by the administrator
 - CONTRACT: function can only be called once before `notify_of_verdict()` is called.
- 3) We need a new function, `notify_of_verdict()` that takes:
 - > win: a boolean that is True if the player has won, False otherwise
 - > prints a message to notify the player that they won or lost.
 - > returns nothing. The admin does not expect anything from this function.
 - CONTRACT: `notify_of_verdict()` can only be called once before `player_option_picker()` is called.
